

Reverse Osmosis (RO) Systems

- Reverse Osmosis (RO) is the best way to ensure that your plants are getting exactly the right nutrients at exactly the right time, and nothing else
- The method utilizes membrane micro filters
- This process can remove 99% of total dissolved solids (TDS) giving you a basic, pure water foundation to add the perfect solution to grow the biggest, healthiest plants
- These filters can serve any size irrigation system and are the perfect starting point for hydroponic growers and soil growers alike

Please call our irrigation department to help design a system or place an order today!

Simplicity with outstanding results;
It's easy as pie!

Plant Pie 8
7.8" x 3"

Plant Pie 11
11" x 3"

Muffin Tray
with 4" cells
11" x 21.5" x 3"

11" Plant Loaf

Dosatron Fertilizer Injectors

- The Dosatron injectors are designed to be installed directly in the water supply line; the injector operates without electricity, using water pressure as the power source
- Inside the injector, the concentrate is mixed with the water, and the water pressure forces the solution downstream
- The amount of concentrate will be directly proportional to the volume of water entering the injector, regardless of variations in flow or pressure which may occur in the main line
- All Dosatron injectors must be used with a filter kit
- All Injectors include mounting bracket, suction hose, weighted strainer and operating manuals
