BOLD - Black Out Light Deprivation Tarp

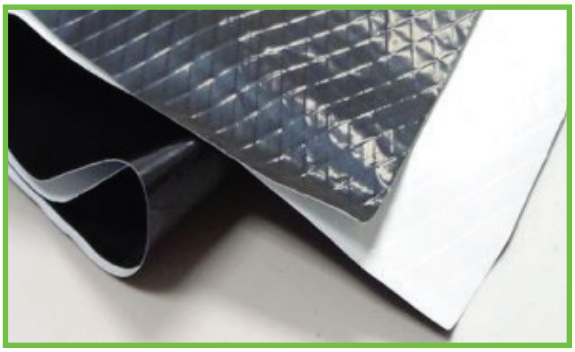
Light deprivation is a technique used in horticulture to force crops to bloom earlier. By depriving a garden of an extended photoperiod, the plants stay in a blooming stage. This means a bigger and better harvest, sooner. The black-out cycle can be done automatically or manually. The black-out cover should be durable and highly tear resistant to endure the rigorous motion of each cycle change during the course of growing.

Americover's light deprivation tarps

- The ideal cover for growing environments that require total darkness. Can be used in automatic or manual greenhouse set-ups in addition to indoor grow rooms
- The ONLY lightweight, reinforced light deprivation tarp that consists of two sheets of high strength virgin polyethylene film laminated together with a third layer of molten polyethylene
- White outer layer contains UV inhibitors and thermal stabilizers to reduce heat build-up, and condensation
- Black outer layer contains carbon black to enhance outdoor life and ensure total light deprivation.
- Heavy scrim and diamond reinforcement placed between plies greatly enhances tear resistance and increases service life

Size	Catalog #	Price per Each 1-5	Price per Each 6 & up
13.5′ x 100′	26-00040		
26.5′ x 100′	26-00060		
33′ x 50′	26-00080		
33′ x 100′	26-00100		
40′ x 50′	26-00120		
40′ x 100′	26-00140		
46.25′ x 100′	26-00160		
52.75′ x 100′	26-00180		

100% light blocking, 8 mil thickness, available in custom sizes up to 330ft wide. Withstands both heat & cold (-70°F to 180°F operating temperatures)



BOLD - EZarm Manual Swing Arm

Light Dep made easy!

Cover and uncover your greenhouse in minutes with ease

- Allows a single person to use daily without additional help
- Covers structures up to 15′ high, 30′ wide, and 100′ long
- Base plates are mounted to concrete foundations for the strongest assembly on the market
