

ARCH 6500

A tradition in and of itself, Conley's Arch Series 6500 represents one of the most versatile greenhouses on the market today. Incorporating Conley's superior strength roll-formed arches and purlins, this structure is as strong as it is functional. With its flush mounted purlin design, the Arch Series 6500 can be adapted to polyethylene or rigid covered roofs all while promoting built in condensate control features.

Main Features

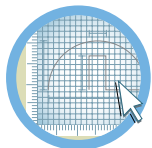

- Superior ROLL-FORM Gothic arches and ROLL-FORM purlins ensure unmatched structural integrity
- Each arch assembly is produced out of a single continuous coil of steel, no splices required, from peak to gutter connection
- Condensate control features built in ROLL-FORM arches and purlins
- Can be covered with polyethylene or rigid coverings
- Certified to meet International Building Codes

Value

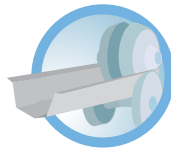

- Components are shipped pre-punched and cut to length simplifying the installation
- ROLL-FORM components nest one into the other during shipment, substantially reducing freight rates

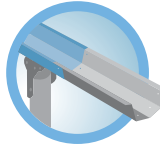

Anti-Condensate Control
